

CLASSIC CONCRETE FENCING COMPANY

Specialists in Concrete Fence Design

Concrete fencing is becoming extremely popular. New exciting designs now allow ornate fencing that is pleasing to the eye and will last for years.

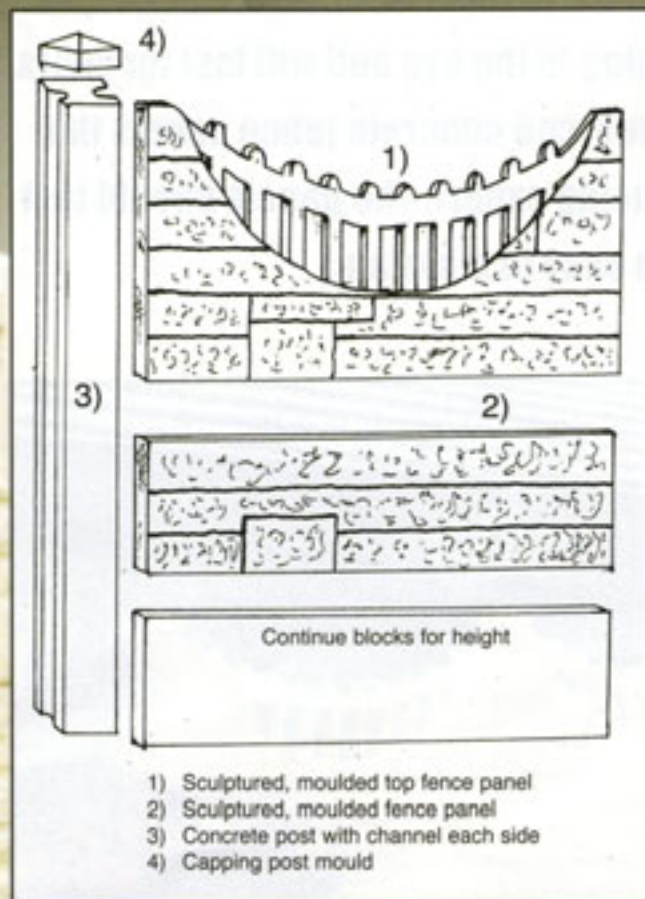

Classic Concrete Fencing supply reinforced concrete fence panels that can be assembled quickly by your fencing expert. The panels should last 25-30 years and are easy to maintain.

NEW

Stone wall effect with a trellis

- Easy to assemble
- Lasts for years
- Easy to maintain
- 1-6 foot heights available
- Strong and durable
- Style without high cost

Posts :

To suit various heights from 900 - 2700mm

Footing depth:

8" - 18" (203 - 458mm) dependent on height

Footing width:

6" - 8" (152 - 203mm)

ASSEMBLY POINTS

More designs coming soon!

- For maximum strength, place the post into a solid footing linking the whole fence .
- Post can be set initially with quick fix post mix or similar.
- Ensure the footing allows the panels to set level and at the correct height (the top panel should set level with the top of the post).
- The best method of setting the posts is to use a wooden template for post spacing and height.
- Once post and footing are set, place panels by sliding into post recess and hold in place with a wedge.
- Run pointing into the back to hold the panels in place.
- Allow to set and remove wedges.
- Allow the concrete to 'go off' fully (28 days) before painting.
